

Pricing Strategy Document

1. Executive Summary

The CFO Bot is a cloud cost estimation tool that helps businesses predict monthly expenses for running AI-powered chatbot applications. This document analyzes cost drivers and provides optimization recommendations based on data from the calculator.

The CFO Bot is available at: <https://cfo-bot-fc73a.web.app>

2. Cost Components

Component	Pricing Formula	Source
AI Inference	$(\text{Tokens} / 1\text{M}) \times \text{Model Rate}$	SSOT Section 3
Hosting	Fixed: \$0, \$5, or \$10/month	SSOT Section 4.1
Storage	$\$0.02 \times \text{GB}$	SSOT Section 4.2
Bandwidth	$\$0.05 \times \text{GB}$	SSOT Section 4.3
Database	$(\text{Reads} \times \$0.0001) + (\text{Writes} \times \$0.0002)$	SSOT Section 4.4

3. Cost Analysis Scenarios

Scenario	Users	Msg/Day	Model	Storage	Bandwidth	Total Cost
Small Startup	100	5	Lite	5 GB	5 GB	\$5.39
Growing Business	500	10	Standard	20 GB	20 GB	\$21.40
Enterprise	5 000	20	Pro	100 GB	100 GB	\$912.00
High Traffic	10 000	30	Pro	200 GB	500 GB	\$2734.00

4. Key Findings

- Pro model costs 45.28 % more than Lite model for the same usage
- AI inference represents the largest cost component for most scenarios
- Storage and bandwidth costs remain relatively small unless usage is very high
